

## How to run the kiosk and editor

### 1) Install Java

Follow this link and install Java 8. (CLICK)

### 2) Download the latest release of the kiosk

The zip files can be found here. (CLICK)

### 3) Extract the zip to a folder

#### Windows

Inside the File Explorer:

- a. Right click the .zip file
- b. Select **Extract all...** from the context menu
- c. Choose the folder to extract the files to

#### MacOS

MacOS automatically extracts .zip files when they are downloaded.

If that's not the case, navigate to the .zip file in Finder and double click it. The contents should extract to a folder with the same name.

### 4) Run the kiosk or editor

#### Windows

Inside the folder of the *extracted* kiosk, double click **kiosk.jar** to start the kiosk or **editor.jar** to start the editor.

Windows may ask for permission to run the file. If Java is properly installed, the application will open. If you cannot open either application, check to make sure any installed antivirus isn't interfering.

#### MacOS

Inside the folder of the *extracted* kiosk, right click the **kiosk.jar** or **editor.jar** file and click **Open**. There may be a warning - simply continue through it by pressing **Open**.
